Chattogram, Bangladesh

Career Objective

Aspiring Full Stack Developer with hands-on experience building and deploying responsive web applications using React, Node.js, Next.js, and MongoDB. Eager to leverage technical expertise, problem-solving skills, and practical project experience to contribute to innovative software solutions in a dynamic organization while continuously learning and growing in the tech industry.

Education

East Delta University

Jan 2022 – Jan 2026(Expected)

Bachelor of Science in Computer Science & Engineering

Experience

Kinbo Ekhaney (E-commerce)

Dec 2024 - Oct 2025

Full Stack Developer

- Built a full-stack e-commerce platform using React and Node.js, from planning to deployment.
- Built internal tools for product and order management, including automated email notifications.
- Improved platform metrics: 1,000+ monthly users, 30% sales growth, and 20% increase in session time.
- Applied Google Analytics to optimize user experience and track engagement.

Technical Skills

Languages: JavaScript, C++, JAVA, Python

Frameworks & Libraries: React, Node.js, Next.js, Express.js, Tailwind CSS

Databases & Platforms: PostgreSQL, MySQL, MongoDB

Tools & Deployment: Git, GitHub, VS Code, Postman, Render, Railway

Projects

Kinbo Ekhaney Shop - Nodejs, React, MySQL, Express

[\[Admin Panel\]](#) [\[E-Commerce Preview\]](#)

- Built a full-stack e-commerce platform with category-based product listings (PostgreSQL - JSON), fast search, secure ordering, and email confirmations (Nodemailer).
- Users can track orders (MySQL), and the React frontend is responsive across devices.
- The admin panel (Node.js backend) supports product CRUD, PDF invoice, and order status management.
- Axios used for API communication. Hosted and deployed via cPanel with backend performance optimizations and analytics.

Don'tWorry – (Wellness Web App) - Next.js, PostgreSQL, Tailwind CSS, Nodejs

[\[Preview\]](#)

- Built a wellness app that lets users track their mood, write reflections, and browse past entries.
- Implemented Supabase authentication with secure login, signup, and protected pages.
- Added a Mood-Based Movie Recommendation feature with a movie icon that suggests films depending on the user's selected mood.
- Developed a Music Search & Player system using YouTube-style fetch logic, with dynamic grids and an embedded video player. Integrated database storage for mood logs, user details, and mood-linked content.
- Designed a clean, responsive UI with sidebar navigation (Home, Music, Movies, Settings).

Star Movie - React, NodeJS, MongoDB, Express

[\[GitHub\]](#) [\[Preview\]](#)

- Built a MERN stack movie booking platform with user authentication, seat selection, & secure payment checkout.
- Designed an admin panel for managing movies, viewing user bookings, and performing CRUD operations.
- Developed RESTful APIs to handle movies, users, and booking data efficiently.
- Integrated dynamic movie listings, real-time seat availability, & state management using Redux for a smooth user experience. Implemented JWT-based authentication for secure login and user data protection.
- Created a responsive, modern UI with React and React Router for seamless navigation.
- Deployed the application using Vercel (frontend) and Render/Heroku (backend) with optimized API performance and scalability.
